

Océ TCS 500

System information

Professional colour, highly productive

Wide format colour print, copy and scan system

Professional colour, highly productive

Wide format colour print, copy and scan system

Increasing demand for colour plots? Now there's a way to streamline your wide format workflow. Whether it's partly or completely in colour, the Océ TCS500 has all the answers. With its convenient, user-centred operation, you'll always get excellent results. It's the single system with professional productivity for every wide format task. Designed to meet your requirements today and in the future.

Ready for any job: highly productive

With the Océ TCS500 you can print, copy and scan all types of originals, monochrome or colour, from A4 up to A0 and up to 36" wide. Quickly, conveniently and with high quality. So you don't waste any time. The scanner is ready for use instantly. The powerful processing unit ensures fast processing. Which means the Océ TCS500 is ready to handle every wide format job—highly productively.

Excellent throughput in colour and monochrome

The Océ TCS500 delivers top productivity for every job. The drivers free up your workstation fast when printing, so you can continue working. Files are quickly and reliably processed by the Océ Power Logic® Controller, which can handle new jobs while printing. High speed means an A0 colour plot is printed in just a minute. While an A0 monochrome plot is ready in only 40 seconds. There's no need for trimming, and with a choice of delivery options you get your prints quickly and sorted the way you want them.

Designed around you

Whether you need to print, copy or scan, the Océ TCS500 makes your work easy. Excellent printer drivers give you helpful system feedback, and with the advanced job submission software you can easily create, store and load even the most complex jobs. The innovative local control panel makes copying and scanning easier than ever. To save time, you can predefine recurring copy and scan jobs in templates. So complex operations are available at the push of a single button. And with the advanced queue manager you have full control of all pending jobs.

The right results every time

The Océ TCS500's advanced technologies not only make operation easy, they also ensure optimal quality. The unique Dynamic Switching Technology automatically determines the best print strategy for each part of the plot. So you get high print quality without sacrificing productivity, and without the need for complex print settings. You also have easy access to colour management to print the colours you expect. The proven Océ Image Logic® technology enables you to make copies that are even better than the original.

Performance you can count on

Like every professional Océ system, the Océ TCS500 is designed for sustained high performance. That's reflected in numerous functions that save you time and avoid unnecessary interruptions. Like the fully automated printer calibration that enables reliable overnight printing. And the fact that you can change rolls and refill inks without stopping the print process.

Fully configurable to your needs

The Océ TCS500 can be fully configured to match your needs. You can choose 1, 2 or 3 roll units, configure the processing memory in the controller and select the desired delivery option. In addition, the copy module is a separate unit. That means extra flexibility, but without compromising the productivity of the total system. So you can match the system exactly to your document requirements and your workflow.

A safe investment

Your business, and your working process, are most probably changing constantly. That's why the versatile Océ TCS500 provides a cost-effective growth path for future upgrades of both system hardware and software. We also provide an extensive programme of services and support to optimise your return on investment right through the system life cycle.

Printing for Professionals

Océ helps the people who make our world. Companies everywhere use Océ technical documentation systems in manufacturing, architecture, engineering and construction. High speed Océ printing systems produce millions of transaction documents each week, such as bank statements and utility bills. And in offices around the world, people use Océ professional document systems to keep the wheels of business and government turning. Océ is also at work in publishing on demand, newspaper production and wide format colour for spectacular display graphics.
